

Assignment For Laravel Developer

Prepared For: The Shortlisted Candidates

Prepared By: TheCodeWork Team

The task is to create a ToDo application using Laravel Framework and VueJS.

1. The Laravel application would serve APIs only.
2. The frontend part can be made in VueJS (separately using VueCLI or any other way you prefer)
3. The ToDo application should let the user create, update, delete a ToDo.
4. Users need to authenticate themselves before adding any ToDo. (Authentication needs to be done via APIs only)

Bonus Points for

1. Using tailwind CSS for the UI instead of other UI Frameworks.
2. Using Test Cases (Unit or Feature or E2E) would act as a big bonus.
3. Code Quality and readability.

We'll be assessing you for

1. Code Quality
2. TailwindCSS - How quick a learner you are.
3. VueJS - How efficiently you are using the framework.
4. Database - Eloquent queries and approaches.

You need to make it of Vue Js.

(There are other few things that we do not mention here but would like to see in your code. I hope you'd be aware of all the programming and coding best practices.)

Your deadline for the submission of the application is Thursday 15th December 2022. Early submissions are always welcome and serve a great impression. You can submit a GitHub link while submitting the assignment.
